LUCKY WIN AT POKER

King Got His Start.

George Wingfield's Phenomenal the Tonopah Club-A Happy Touch from a United States Senator.

George Wingfield is the new bonanza king of Nevada. He is a really picturesque character. Five years ago he was a penniless cowboy, occasionally varying his occupation by dealing fare and tending roulet wheels. The son of a sheepherder and cattleman, he had been brought up in rugged places and readily fell into the ways of rugged people, writes Barton W. Currie in the New York Evening Post. In Costumes Worn by Semi-civilized Goldfield, where Wingfield is revered both for his wealth and adroitness with a gun, men whisper in your ear, pointing out the quiet, taciturn young man, that he was a "bad man" at the age of fifteen; that if notching weapons were a modern custom, the hilts of his personal ordnance would be cut away. He is only twenty-nine years old, and there is no doubt of his prowess. His reputation as a gunfighter extends all the way from Reno to Bullfrog, and he is known with respect in many little ranch towns in Washoe County and along the foothills of the Cal-

The sun-scorched, alkali-coated desert of Nevada, however, did not spontaneously yield any Aladdin treasure to George King Solomon mine to the notorious this gracious acknowledgment of the gift: "Scotty." Wingfield's wonderful lamp was first lighted on a poker table in Reno. He began there with an unusual run of acquiring the "club," Wingfield tempted shoulders every feast day." no more this rough-paved range of fortune. The "tiger" he vanguished has sumably authentic sources Went Broke at Reno

desert bristled with activity. Prospecting parties were fitting out in the rush for the new camps in the south. There were the usual throngs of cattlemen and a sprinkling of San Franciscans, who were velopment of the new communities.

Wingfield had been working out a system "dead sure" to beat the roulet wheel. He had always a weakness for "systems" until he was finally made. Then his disposition changed, and he laughed at the Greatest of all diamonds is the "Cuilion the shoals of the Tonopah club. His had met the same fate at Reno. The little fvory ball capered perversely, skipping 1905, weighing 3025% carats, or about 1.37 ment. the "sure' numbers, until at last the \$5,000,000. COMPETES WITH STEAM ROADS

An Experiment in Railway Operation That Is Being Watched with Interest Everywhere - What It Means If Successful-Some Facts About the Construction.

A coterie of Cleveland men has shouldered the task of building a railroad to be operated by electricity between the citles of Washington and Baltimore with an offshoot to Annapolis which will cost In these days of \$10,000,000 and \$20,000,000

combinations of electric railway lines, a whereby further attempts will be made to salve the bullion which formed part of the cargo of the British warship Lutine, which foundered over the coast of Holland in 1799.

Of course the treasure was insured, and style the coast of Holland in 1799.

combinations of electric railway lines, a \$5,000,000 enterprise may not look impressively large. There are however, certain features surrounding the building of the large.

over the achievements of private capital while so much is heard of the stupendous task of the government in the peninsula The latter will take eight or ten years to complete its work, while a few Cleveland men who commenced a little over a year ago what was to them just as stupendous a piece of work, expect to complete their labors within another year. Advance in Construction.

This new electric railway will be a distinct advance in electric railway construction and operation. If it is the success expected of it, the Washington, Baltimore, and Annapolis Railway will lead the trolley into new fields and a

Cleveland's captains of industry have always been in the foreground in the development of electric transportation methods, and the Cleveland people who are risking \$5,000,000 in this new enterprise confidentially believe that the Wash ington-Baltimore line will open the way to a new era of trolley building. It will be the first electric line built

between two large American cities lo cated as these two are, about forty miles from center to center, and between which the passenger traffic is so dense as to furnish the most profitable imaginable business for the steam roads. It will be the first direct test between steam and trolley in a field where the traffic is densest and competition the keenest.

It will be the first real locking of horns of the two giant forces which supply the energy of propulsion in the transporta tion world, and it will go a long way in The bells toll out in London, and the determining just how far electricity may defying the steam roads along their choicest highways. The bulk of the enormous business they have worked up has been on single track roads, and is busiess that the steam roads do not particularly want.

First Direct Competition

The Washington-Baltimore line will be the first direct competition between the highest type of electric railway ever built. and in direct competition with steam roads in territory where the passenger traffic has been developed to its highest possible efficiency.

This is why this effort of Cleveland traction builders is unique, in railroad building in this country, and it explains why steam railway experts are watching with as much interest as are the electric builders. This is not because they fear the opposition, but because steam railway builders themselves have long since recognized the value of each ad-
